When excellence evolves to virtuosity... **MIMETECH**

With the passing of time, nature has been able to mutate and adapt itself into new forms over and over again. If we look around us, we will find thousands of examples of nature avoiding obstacles and adapting to new rules. For millions of years, matter has constantly evolved to achieve perfection.

These incredible changes have resulted in new compositions of natural materials with extraordinary complexity as well as astonishingly beautiful forms and colors. Mimicking nature to achieve the most realistic results, the evolution of something already excellent has now become unsurpassable.

In this relentless pursuit of perfection, we have redefined innovation by introducing Recycled Glass Surfaces (RGS). A revolutionary material made with crystalline silica components that not only mirrors nature's beauty but also embraces a safer, more sustainable future. The evolution of this formula has reached a milestone where aesthetics and well-being coexist in perfect harmony.

RECYCLED GLASS SURFACES

For thousands of years, humans have turned to nature as a source of inspiration for their own creations. The shapes, colors, and textures found in nature transcend their own boundaries to become part of buildings, sculptures, paintings, and even everyday products like our engineered slabs. Nothing compares to the beauty and sincerity of the natural world.

When it seemed like the ceiling of excellence had been reached, Mimetech Stone brought together the beauty of natural stone with the advantages of cutting-edge industrial engineering to offer the innovative Recycled Glass Surfaces (RGS) material, totally made with crystalline silica-free components.

The exclusive and patented Phi 4R+ Fullbody technology used during the manufacturing process of the slabs enables the creation of a conscious and responsible material with up to 90% of recycled components. Additionally, the advanced processes used by this technology bring slabs with further perfected full-body, superior translucency and a high resistance to absorption and stains.

RGS combines a revolutionary, sustainable 4R+ formula with outstanding aesthetics, a true game-changer. But that's not all. To match the beauty of natural stone, Mimetech takes it a step further with the application of Nano-Ink technology, which precisely prints every vein, detail and nuance of the pattern onto the surface of the slabs, achieving unsurpassable visual depth, ultra-high definition, amazing brightness and light reflection, enduring colors, and absolute authenticity in every detail.

MIMETECH
Stone

Our priority: your life

The stone industry is undergoing a transformative journey. The increasing regulations on crystalline silica in synthetic stones have prompted companies to rethink the immediate future of the sector. Mimetech Stone proves its visionary approach by anticipating market demands and taking the lead in driving change.

A material designed with cutting-edge technology that maintains the highest standards of high-end quartz surfaces but is totally made with crystalline silica components.

ETERNAL

SHIRAZ

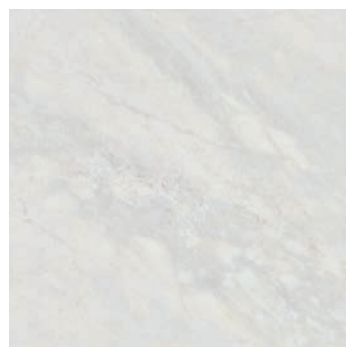

As its name suggests, Eternal is a timeless classic that complements any setting, while its fresh, modern touch makes it perfectly suitable for the most contemporary homes. This gentle and understated pattern gives a refined and classic appearance. Its focal accents in gold and its subtle texture elevates the overall look.

Eternal is available in six different shades, all crafted from an innovative material made with recycled components and free from crystalline silica.

NEBULA

STONES

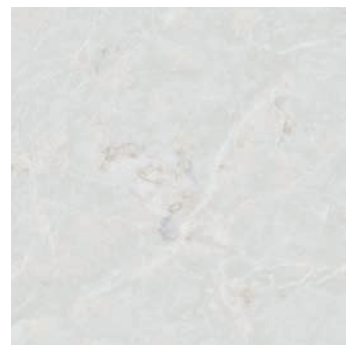

A luminous backdrop emerges on the surface as thousands of capillaries, giving rise to a vast cracked landscape. Nebula's charm is enriched by delicate golden hues and countless microparticles scattered across the surface, adding dynamism and depth. Nebula exudes an almost hypnotic energy, sure to be the focus of attention.

Nebula is available in six different shades, all crafted from an innovative material made with recycled components and free from crystalline silica.

the high definition of the printed slabs...

...the realism and depth of the full body

Nano·Ink
PRINTING TECHNOLOGY

phi4R+
FULL BODY

4DEPTH

A new dimension has been revealed. Hyperrealist veining penetrates and runs through the surface with natural fidelity, allowing the eyes to be drawn into the surface. Your senses will get beguiled, enjoying every single detail.

FULLBODY

Veining on the surface runs through the whole body of the material, crossing beyond its own limits, making the veins visible no matter the cut.

LUMINANCE

Light permeates each piece to bring colors to life, creating a symphony of different shades, details, reflectivity which will change depending on the light received.

GEOSEEM

Absolute realism in every detail. Each pattern appears as a true product of nature, simply extracted from the bedrock.

4KVIEW

Ultra-high definition like no other, fused with astonishing intensity of colors, providing an impressive and realistic visual strength.

PERMACOLOR

Permanent colors, everlasting, in spite of the passage of time and use. Mimetech will retain its original properties, white background and dramatic colors forever.
